

## IN BRIEF

### **NITK, Robosoft create collaborative platform**

MANGALURU

National Institute of Technology-Karnataka at Surathkal and Robosoft Technologies, Udupi, have joined hands to develop a collaborative platform to connect students and enterprises to interact directly for multiple purposes, including projects, internships and jobs. A statement from NITK said students often share profiles with organisations to find career opportunities while diverse sets of organisations seek profiles across skill sets and academic credentials. The proposed platform aims to meet the needs of both. Built on Web 3.0 technologies, the proposed platform would be different from the current solutions and enables students and organisations to own their personal data.
